

THOTA OM SADA SIVA VENKATA NARAYANA

9059374985 | narayanathota23@gmail.com | github.com/narayana-thota | linkedin.com/in/narayana-thota

PROFESSIONAL SUMMARY

Computer Science Engineer with a solid foundation in software development and web technologies. Proficient in building end-to-end applications using Python and JavaScript frameworks, with hands-on experience in database management and API integration. Experienced in integrating intelligent data-driven features into web platforms and eager to apply technical skills to solve real-world engineering challenges.

EDUCATION

Nri Institute of Technology Vijayawada

Bachelor of Technology in Computer Science and Engineering GPA: 8.7 2022 - 2026

KVSRT Junior College Tenali

Board of Intermediate Education(MPC) Percentage:67 2020 - 2022

SKILLS SUMMARY

Languages: Python, C, SQL.

Web & AI Technologies: React.js, Node.js, Express.js, HTML, CSS3, Fast API, AI Integration, RAG, LangChain, Pinecone.

Tools & Platforms: Git, GitHub, Streamlit, MongoDB, VS Code, Postman.

PROFESSIONAL EXPERIENCE

Infosys Springboard | Intern Nov 2025 – Jan 2026

- Engineered an AI Legal Contract Analyzer using Large Language Models (LLMs) and RAG pipelines to autonomously extract key clauses and flag compliance risks.
- Integrated these AI architectures into an enterprise-grade application, gaining practical experience in automating and scaling complex document workflows.

AICTE Tech Saksham | Intern Oct 2024 – Dec 2024

- Developed an AI-based system to classify plastic waste into organic and recyclable categories, helping improve waste segregation and environmental sustainability.
- Applied the solution on real-world image data and achieved high accuracy, gaining practical experience in building and evaluating AI models for real-life applications.

PROJECTS

QueryStream | Full-Stack AI Platform

- Developed a full-stack MERN productivity suite integrating generative AI to transform static PDF documents into automated podcast audio.
- Engineered an optimistic UI for zero-latency task management and implemented a secure, decoupled architecture using stateless JWT authentication.

Automated Blood Cancer Detection | Deep Learning System

- Developed a multi-model deep learning architecture for the automated and highly accurate detection of blood cancer from medical imagery.
- Engineered the image classification system utilizing Convolutional Neural Networks (CNNs) to efficiently extract features and analyze complex medical data.

CERTIFICATIONS

NPTEL Cloud Computing completed an 8-week comprehensive course on Cloud Computing fundamentals and DS.

Databricks Generative AI Fundamentals Successfully completed a comprehensive certification covering Large Language Model (LLM) architectures, the generative AI project lifecycle, and ethical deployment strategies.

IBM Data Science 101 Completed foundational training in data acquisition, preparation, and analysis methodologies.
